

# CONNECTING A SWM16 to a Genie (HMC) & (3) HR24s

(With DECA Router Package)

NOTE: The SWM16 can be installed indoors or outdoors. The SWM power supply must be installed indoors, but can be installed at or near a receiver.

- Coax cable
- Power Cable
- Ethernet (Cat-5)

In this diagram, a Genie (Home Media Center/HR34) and 3 HR24 HD DVRs are attached to a SWM16. The Genie is connected to the SWM2 port of the SWM16 and the three HR24s are connected to the SWM1 port through a 1x4 SWM splitter. The DECA router package is connected to one of the 1x4 ports and provides Internet access to all receivers connected to the SWM16. This system could support two more HD DVRs without maxing out the SWM16 (one on the SWM1 port and another on the SWM2 port). Because the HR24 has a built-in DECA, no DECA is connected to the HR24s. If you are connecting an HR21-HR23 or a THR22, a separate DECA adapter is required at the receiver if you are also connecting a DECA Router Package.

NOTE: Your DECA Router Package may vary from the one pictured, but the connections on all DECA Router Packages are the same.
